Sample Gas Conditioning You Can Trust

JCL-304 / JCL-319 Gas Conditioning Systems

APPLICATION

- Extractive gas analysis
- · Emission and process monitoring
- Continuous sample gas conditioning of humid process gases
- Continuous drying of sample gas to a precise low and constant outlet dew point
- Minimises water vapour cross sensitivities and volumetric errors

BENEFITS

- Complete solution for a great number of applications
- Longterm reliable reproducable measuring results
- Optimum operational safety due to self-monitoring
- Extremlely precise long term stable dew point even under varying loads
- · Fast response time due to low dead volume
- · Very low dissolution rates
- Continuous condensate removal
- Low maintenance operation
- · Easy to maintain design

FEATURES

- · For wall or 19" rack mounting
- Individual configuration due to modular design
- Basic device with high-performance compressor sample gas cooler
- 1 to 4 independant sample gas paths
- Integrated condensate pumps
- · Speed controlled fan
- 11 status LEDs with event memory
- · 2 status contacts
- Additional options: High-performance corrosion resistant, sample gas pump

Easy to maintain robust fine dust filter Corrosion resistant flowmeter with precise needle valve

Reliable condensate monitoring

Acid dosing pump RS485 interface

Gas Sampling Probes

Heated Sample Lines
